RESTAURANT MANAGEMENT SYSTEM

SUBMITTED BY

MEGHANA G N

ABSTRACT

The main aim of this project is to present a comprehensive solution for Restaurant Management System. It helps in maintaining the hotel records and mainly dealing with the registeration. This work developed on a “Restuarant Management System” using HTML, CSS, JavaScript and Bootstrap. The basic target is to keep database of cafe in systematic manner so that it is helpful for the retrieval of the details of particular cafe regarding their food, price, chefs, bill and many more.

AIM

The main aim of designing this project is to get rid from manual entry and record system and try to give easy and simple management system for Restaurant Management System.

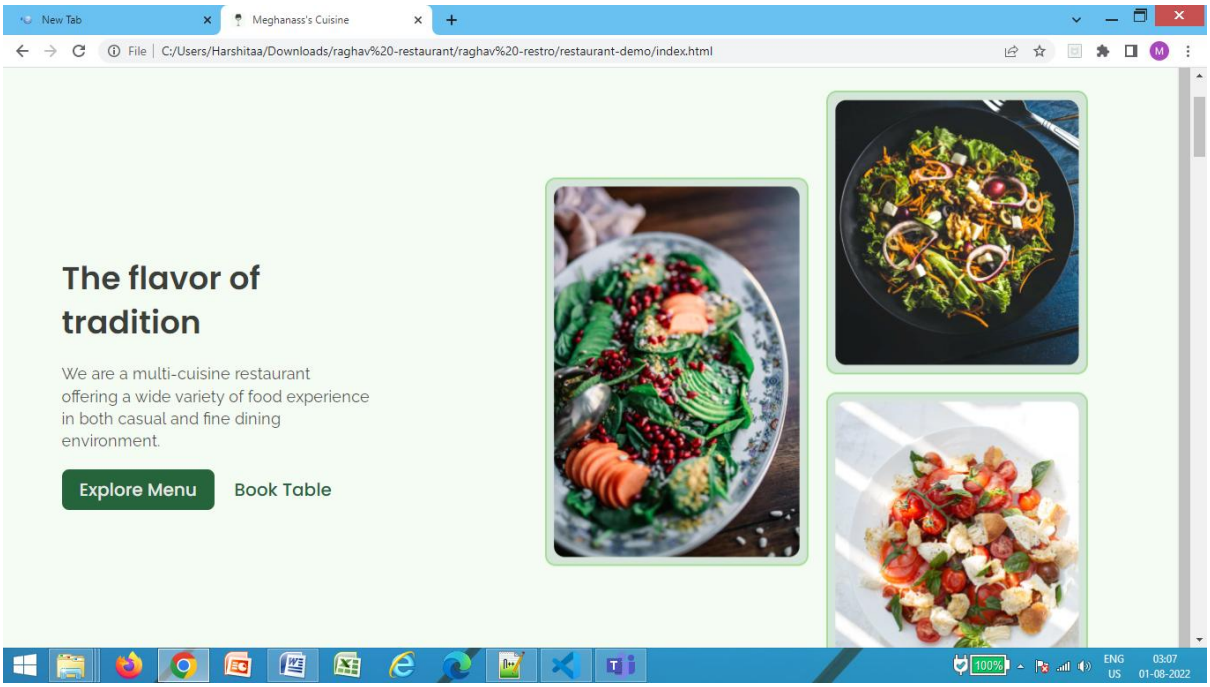
OBJECTIVE

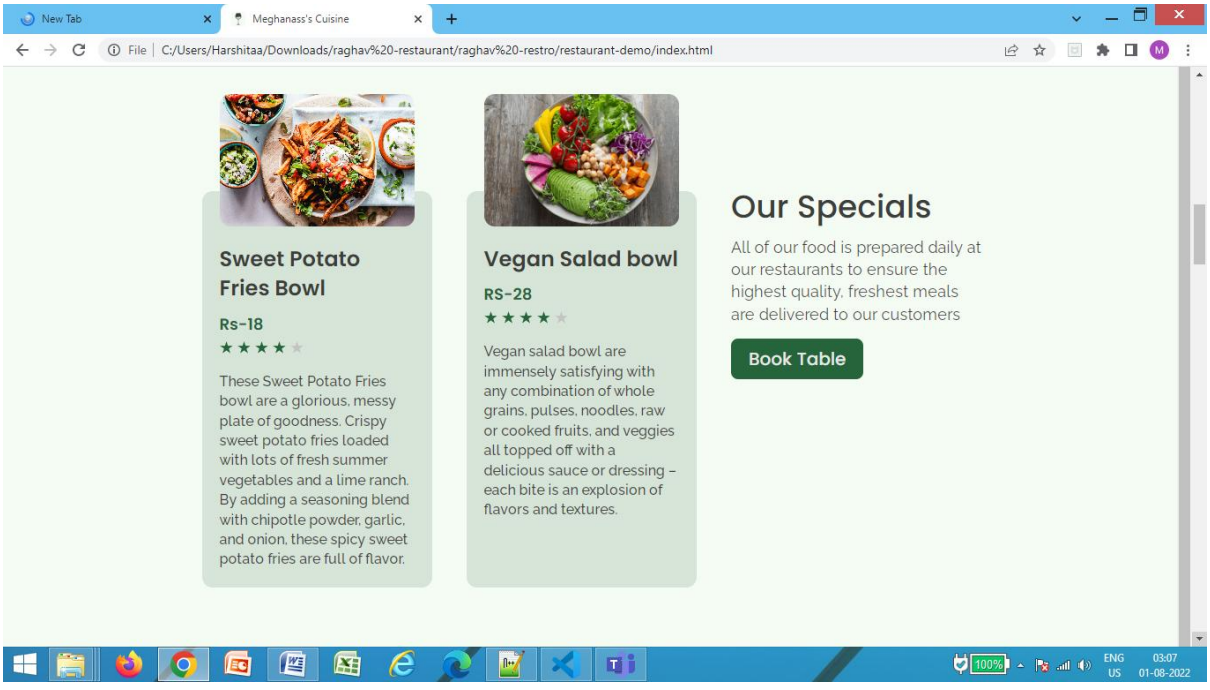
The main objectives of the system are:

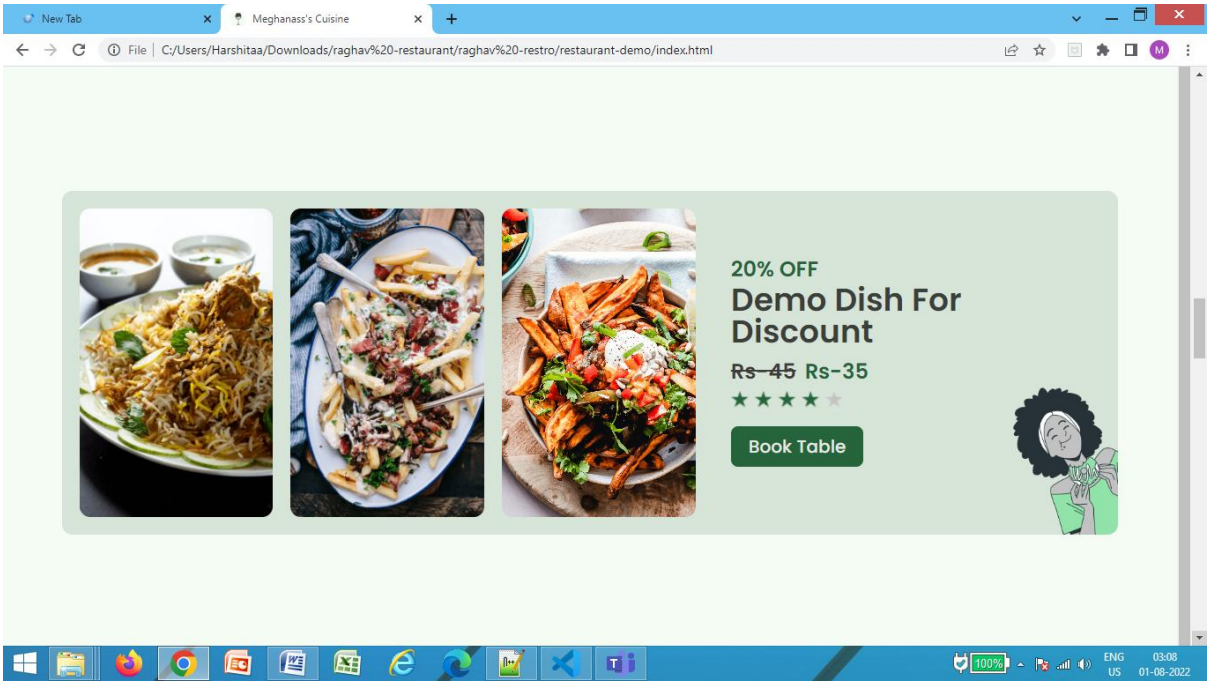
- Simplicity of design
- Easy of implementation that shows and helps to collect most of the information about Food Services.
- The system requires very low system resources and the system will work in almost all configurations.
- The data can be retrieved easily.
- The interface is very user-friendly.
- The data are well protected for personal use and data processing is very fast.

OUTCOMES

i. Home page : It is a simple home page that consists the brief outlook of the website.







New Tab
